

DRC Awarded Contract for Cybersecurity Services From GSA and Department of Homeland Security

Company Tapped to Provide Threat Management and Continuous Monitoring Capabilities

ANDOVER, Mass., Aug. 23, 2011 (GLOBE NEWSWIRE) -- Dynamics Research Corporation (Nasdaq:DRCO), a leading provider of innovative management consulting, science, engineering, and technology solutions to federal and state governments, today announced a new blanket purchase agreement (BPA) with the General Services Administration and the Department of Homeland Security.

Under the terms of the agreement, DRC will provide leading-edge support services for federal, state and local government agencies. DRC will provide security services across all stages of the risk management framework, including continuous monitoring and security authorization. These services provided to DHS and other federal agencies worldwide will help ensure the operational effectiveness of programs and applications. As part of this effort, DRC will identify and remediate flaws and weaknesses in the security controls of information systems that could be exploited by threat sources. DRC will ensure continuity of operations through the planning and execution of disaster recovery plans and contingency plans, as well as proactively assessing threats to DHS and other agencies to ensure the appropriate security controls have been implemented and documented within security plans.

"As the concern for national security through cybersecurity grows, DRC stands ready to approach information assurance through a holistic lens," said Jim Regan, DRC's chairman and chief executive officer. "We emphasize emerging practices in continuous monitoring as we support the DHS by providing solutions that are highly effective in protecting critical information."

The nation's frontline defense against cyber threat, DHS and GSA awarded vendors a place on the risk management framework or certification and accreditation. The BPA serves a number of agencies with information security needs and supports threat management in a more proactive manner. The agreement allows DRC to develop innovative solutions tailored to each individual client environment while bridging disparate systems, creating a uniform environment to provide safe, reliable and resilient IT systems. Through this agreement, DRC will help agencies transition to a more continuous approach to security authorization through the integration of automated tools to meet the growing demands for continuous monitoring.
