## INVISIO Communications wins prestigious Danish engineering prize

**INVISIO Communications and the communication system INVISIO X50 with the headset INVISIO X6, has won the prestigious Product Prize 2010 by the Danish magazine Engineering Weekly (Ingeniørens produktpris 2010).**

INVISIO's communication system X50, with the headset INVISIO X6, was the winner in the category "products for end-users".

"We are always very proud when winning prizes for some of our many great products" says Lars Højgård Hansen", CEO of INVISIO Communications. "It once again shows our commitment of delivering world leading solutions to the most demanding users in the world who needs to be able to communicate in very difficult environments".

The communication system INVISIO X50 consists of the intelligent control unit X50 and the headset INVISIO X6, which is the world's first individually customized dual-digital headset with the patented INVISIO Bone Conduction technology and certified hearing protection. INVISIO X6 is connected to X50 Control Unit that combined with the headset offers electronic hear-thru with situational awareness, which replicates and if necessary amplifies sounds from the surrounding environment to give the user a clear sense of the surroundings. The system also offers protection against acoustic shocks – very high and harmful impulse noises. The system is for use with 2-way radios and intercom systems.
