SentinelOne Joins Fortinet Fabric-Ready Program to Integrate Advanced Endpoint Protection with the Fortinet Security Fabric

Fortinet and SentinelOne Deliver a Joint Security Solution to Address Today's Most Advanced Persistent Threats

SUNNYVALE, Calif., June 05, 2017 (GLOBE NEWSWIRE) -- **John Maddison, vice president of products and solutions at Fortinet**

"A rapid and coordinated response is critical to defend against today's threats. The Fortinet Security Fabric has the breadth to scale across the entire enterprise infrastructure and the Fortinet Fabric-Ready partner program enables customers to apply the benefits of the Security Fabric to their multi-vendor environments. Working with SentinelOne helps our joint customers seamlessly integrate next-generation endpoint protections with Fortinet's broad, powerful and automated security fabric."

Tomer Weingarten, CEO of SentinelOne

"This new partnership with Fortinet is another significant step in changing the face of endpoint protection and replacing the old guard of legacy antivirus software on a global scale. Traditional antivirus products can't keep pace with the evolving threat landscape and companies have relied on outdated technologies for far too long. Through this partnership, our mutual customers can now seamlessly integrate SentinelOne's next generation endpoint protection solution, which is designed to meet the realities of today's threat landscape."

News Summary

[Fortinet®](#) (NASDAQ:FTNT), the global leader in high-performance cybersecurity solutions, and SentinelOne, the company transforming endpoint protection, today announced a Fabric Ready partnership to deliver SentinelOne's next-generation endpoint protection combined with the advanced defenses of the Fortinet Security Fabric. The Fortinet and SentinelOne integrated security solution delivers a comprehensive security architecture that spans networked, application, cloud and mobile environments to provide seamless protection against today's advanced cyber threats.

Closing the Gap Between Detection and Response

As recent high-profile attacks have highlighted, the time between malware's initial network penetration to a full-blown outbreak can be measured in minutes. This means that effectively combatting today's advanced and targeted cyberattacks requires tight integration between security solutions that can detect existing and new threats and automatically respond within seconds.

Joining Fortinet's Fabric-Ready program, SentinelOne Endpoint Protection Platform is now validated within the Fortinet Security Fabric to deliver automated, next-generation defenses to endpoints and servers. This cooperative approach enables zero-touch mitigation, containment and remediation capabilities to rapidly eliminate threats. In addition, threat intelligence from the endpoint is automatically generated and shared to FortiGate enterprise firewalls using Fortinet's FortiClient Fabric Agent, giving IT unified visibility and control over their entire security infrastructure using FortiOS.

SentinelOne's next-generation total Endpoint Protection Platform unifies prevention, detection, and response in a single platform driven by sophisticated machine learning and intelligent automation, enabling IT to predict malicious behavior across major threat vectors, exploits, script-based, and file-less attacks in real-time and without waiting for updated threat signatures.

These capabilities combined with Fortinet's high-performance FortiGate enterprise firewalls mitigates exposure to network threats and enables resource intensive content processing features like SSL inspection and secure VPN connectivity without degrading network or security performance. The Fortinet Security Fabric's integrated, collaborative and adaptive architecture integrated with SentinelOne delivers security without compromise that addresses the most critical security challenges from IoT to the Cloud.

Partnering to Solve Today's IT Security Challenges

The Fabric-Ready Partner Program opens the functionality of the Fortinet Security Fabric to complementary solutions. As part of the program SentinelOne and Fortinet will work together to validate technology integration with the Security Fabric, are committed to sharing roadmaps for consistent interoperability, and will benefit from joint go-to-market initiatives.

The Fabric-Ready program enables customers and channel partners to have greater confidence in their existing technology

investments and Security Fabric offerings knowing that security solutions are proactively validated and ready for deployment. This integration reduces deployment times and technical support demands while delivering enhanced interoperability for more effective and responsive end-to-end security.

Supporting Quotes

"Using DFI for prevention, and combining behavioral-based detection of threats and exploits, gives our mutual customers complete coverage from every vector of attack," said Weingarten. "Coupled with real-time visibility and automated remediation, SentinelOne's approach changes the way that customers can protect against advanced, targeted cyber threats, and the integration with Fortinet means our customers are getting two best-of-breed products that work together seamlessly."

About SentinelOne

SentinelOne is shaping the future of endpoint security with an integrated platform that unifies the detection, prevention and remediation of threats initiated by nation states, terrorists, and organized crime. SentinelOne's unique approach is based on deep inspection of all system processes combined with innovative machine learning to quickly isolate malicious behaviors, protecting devices against advanced, targeted threats in real time. SentinelOne was formed by an elite team of cyber security and defense experts from IBM, Intel, Check Point Software Technologies, McAfee, and Palo Alto Networks. About Fortinet

Fortinet (NASDAQ:FTNT) secures the largest enterprise, service provider, and government organizations around the world. Fortinet empowers its customers with intelligent, seamless protection across the expanding attack surface and the power to take on ever-increasing performance requirements of the borderless network - today and into the future. Only the Fortinet Security Fabric architecture can deliver security without compromise to address the most critical security challenges, whether in networked, application, cloud or mobile environments. Fortinet ranks #1 in the most security appliances shipped worldwide and more than 310,000 customers trust Fortinet to protect their businesses.
