

I owned shares of Osmetech, how do I calculate the number of shares of GenMark stock that I now own?

In June 2010, all of the outstanding ordinary shares of Osmetech plc (“Osmetech”) were acquired by GenMark Diagnostics, Inc. (“GenMark”). In conjunction with that transaction, all ordinary shares of Osmetech were cancelled and each Osmetech shareholder received shares of GenMark’s common stock. For every 230 shares of Osmetech, 1 share of GenMark was issued. As an example, if, immediately prior to the acquisition of Osmetech by GenMark, you held 1,150 shares of Osmetech, you would, after the acquisition, have been issued 5 shares of GenMark stock. If you held a number of Osmetech shares not evenly divisible by 230, the number of shares of GenMark stock you were issued would have been rounded up to the next whole number. For example, if you held 500 shares of Osmetech, you would have been issued 3 shares of GenMark stock.

Please also note that in October 2005, prior to the acquisition described above, there was a reverse split of Osmetech shares at a ratio of 1:10. If prior to the reverse split, for example, you held 1,000 ordinary shares of Osmetech, after the 2005 reverse split you would have held 100 ordinary shares of Osmetech. When determining the number of shares of GenMark’s stock you currently own, please make sure to account for the 2005 reverse split of your Osmetech shares prior to calculating the number of shares of GenMark stock you would have received as a result of the June 2010 acquisition.

Presently, all shares of Osmetech are owned by GenMark. Osmetech is now a wholly owned subsidiary of GenMark. There is no public market for shares of Osmetech. If you receive an inquiry regarding a proposal to buy Osmetech or shares of Osmetech, it is not a legitimate offer and should be treated with caution.

Where is GenMark located?

GenMark is based in the United States. We are incorporated in Delaware and our principal office is located in Carlsbad, California.
