Allot MobileTrends Survey Reveals 61% of Consumers are Likely to Purchase Mobile Security from their Service Provider

89% of Consumers Do Not Pay for Any Protection against Mobile Malware currently

HOD HASHARON, Israel, Feb. 15, 2017 /PRNewswire/ -- [Allot Communications Ltd.](http://www.allot.com) (NASDAQ: ALLT; TASE: ALLT), a leading provider of security and monetization solutions that enable service providers and enterprises to protect and personalize the digital experience, today released [Allot MobileTrends H1/2017 Report: Consumer View on Mobile Security](#).

The survey asked consumers what they know about online threats; their readiness to adopt mobile security services; and their perception of the service provider's role in protecting them online. Results showed that 89% of consumers currently do not pay for mobile security services. The survey also reveals that mobile consumers in every region, representing 61% overall, want and are willing to pay for protection services from their service provider.

Rather than independently seek out, evaluate and download security apps for each of their mobile devices, consumers would like a one-stop-shop for online protection for themselves and their families. This presents Communication Service Providers (CSPs) with a huge opportunity to be the provider of personal mobile security services from their network.

Key Findings:

- 68% of mobile Internet consumers say they are aware of malware. Of these, 1 in 7 consumers have experienced a malware attack in the past 12 months.
- 26% of consumers contact the CSP when facing a malware incident. The same percentage of consumers contact the app developer and most consumers (35%) contact no one.
- 89% of consumers do not pay to protect their mobile device(s) against online threats.
- 61% of global respondents said they would like to buy a security service from their CSP for their connected devices.

"CSPs have a huge opportunity to be proactive and deliver relevant protection," said Yaniv Sulkes, AVP Marketing at Allot

Communications. "Our survey has revealed consumers are demanding simplified protection for their various connected devices and are willing to pay for it. CSPs are best placed to address this industry-wide issue and improve the customer experience."

Allot will be showcasing a live demonstration of a network-based security service at **Mobile World Congress 2017**, taking place in Barcelona from February 27 through March 2, at its booth in **Hall 5 Stand 5G41**.

Methodology

The Allot research team conducted a survey questionnaire with a self-selected sample of 2,150 mobile end-users around the world. They then conducted an analysis to detect the similarities and differences between socio-demographic factors: Regional Background: Africa, America, Asia, Australia & Europe. Age Groups: Up to 14, 15-24, 25-60 and 60+. Gender: Male / Female.

Number of mobile devices: 1-2 handsets, 3-4 handsets 5+ handsets. Full details can be found in the [report](#).

About Allot Communications

Allot Communications Ltd.
