Datawatch Continues to Set the Bar for Ease-of-Use in Self-service Data Preparation

Latest version of Monarch Complete shatters the paradigm that powerful data preparation and analytics operations must be complex, or require coding and scripting

BEDFORD, Mass., Nov. 06, 2017 (GLOBE NEWSWIRE) -- [Datawatch Corporation](#) (NASDAQ-CM: [DWCH](#)) today announced [Datawatch Monarch Complete](#) 14.3, the latest version of the company's proven self-service data preparation platform. The offering's simplicity and ease-of-use enables even novice business users to easily and rapidly extract, manipulate, enrich and combine disparate data from virtually any source, and then prepare it for analysis and reporting — without coding, manual data entry or involvement from IT.

Monarch Complete has more than 14,000 trusted and loyal customers who have experienced first-hand how the solution simplifies and automates data access and preparation processes, resulting in tremendous time savings. Monarch Complete 14.3 takes the key features that Datawatch customers rely on and makes them even better. Enhancements include:

- 1 **Powerful calculations without complexity** — Everyday users can now perform complex geospatial and scientific calculations, typically reserved for data scientists, through a clickable user interface (UI) — no coding, scripting or Ph.D. degree required. A public data marketplace also allows users to enrich their data sets with public data directly from the UI. Simplified data redaction, easier transformations and "point-and-click" vLookups are also included in the release.
- 1 **Graphical UI makes complex operations intuitive** — A re-designed UI simplifies complex operations and instructs users how to perform them. Graphical transformation overviews make it easier for users to understand how they're manipulating data. And visual wizards enable data extraction from complex schemas in JSON and XML formats.
- 1 **New time-saving features** — Version 14.3 offers a variety of new capabilities that make tasks faster and even more repeatable, including a named export feature that allows users to save exports and quickly run them again on a regular basis. Integration with Monarch Swarm makes it easy and fast for users to share and schedule models.

Business analysts have embraced Monarch Complete because it makes complex data work easy, saving valuable time and energy — and it does so better than any other solution on the market. Users can access all of the data they need to make timely, more strategic business decisions, and the time they spend on data preparation, reconciliation and reporting processes can be drastically reduced.

"The fastest path to insight is data that is prepared properly," said Jon Pilkington, chief product officer at Datawatch. "Other data preparation products make the task too difficult. Common operations like web scraping and basic vLookups are time-consuming and complex. And, often, there's coding or scripting required. This is asking too much of the average user, and it increases the margin for error in data preparation. Datawatch Monarch Complete gives users the ability to acquire, prepare and blend information of all types and sources to derive the pressing 'why and what' answers they need to improve operational processes and drive the business forward. And this latest version allows them to spend even less time preparing data and more time analyzing it. Many of our customers agree that no other solution makes a lasting business impact like Monarch Complete."

Safe Harbor Statement under the Private Securities Litigation Reform Act of 1995

Any statements contained in this press release that do not describe historical facts may constitute forward-looking statements as that term is defined in the Private Securities Litigation Reform Act of 1995. Any such statements contained herein, including but not limited to those relating to product performance and viability, are based on current expectations,

but are subject to a number of risks and uncertainties that may cause actual results to differ materially from expectations. The factors that could cause actual future results to differ materially from current expectations include the following: rapid technological change; Datawatch's dependence on the introduction of new products and product enhancements and possible delays in those introductions; acceptance of new products by the market, competition in the software industry generally, and in the markets for next generation analytics in particular; and Datawatch's dependence on its principal products, proprietary software technology and software licensed from third parties. Further information on factors that could cause actual results to differ from those anticipated is detailed in various publicly-available documents, which include, but are not limited to, filings made by Datawatch from time to time with the Securities and Exchange Commission, including but not limited to, those appearing in the Company's Annual Report on Form 10-K for the year ended September 30, 2015. Any forward-looking statements should be considered in light of those factors.
