Control4 Awarded Three Consumer Technology Association TechHome Mark of Excellence Awards at CES 2018

Control4 Wins Home Automation Product of the Year, Audio Product of the Year, and Best Education Program of the Year

SALT LAKE CITY--(BUSINESS WIRE)-- Control4 Corporation (NASDAQ: CTRL), a leading global provider of smart home solutions, announces its receipt of three TechHome Mark of Excellence awards for its newest software release, OS 2.10, the Triad One Streaming Amplifier, and the Pakedge Certified Network Administrator (PCNA) training program. The awards are presented by the Consumer Technology Association (CTA) to recognize the best products in custom integration and installed technology across more than 30 categories.

"It is an honor to win these awards. In a year flooded with new products and technologies, the recognition for Control4 truly validates our dedicated efforts to deliver a comprehensive connected home experience for dealers and end-user customers alike," said Control4 CEO Martin Plaehn. "We continue our commitment to providing the best consumer experience and empowering dealers with the tools necessary to be successful. The When > > Then feature in OS 2.10 was created to win the hearts and minds of homeowners, and it continues to do just that; audio performance is fundamental to the smart home experience, and our Triad product line continues to grow to meet all levels of music enjoyment. Networking has proven fundamental to the power and robustness of the connected home, and giving our dealers networking competency is a win for dealers and customers."

Control4 OS 2.10 with 4Sight led the night with a win for Home Automation Product of the Year. With the latest software update, OS 2.10, Control4 connected homes now support more of homeowner's favorite native streaming services, and with the 4Sight subscription, provide new flexibility for homeowner personalization without dealer intervention for an already installed system using When > > Then Automation.

CE Pro's Julie Jacobson called When > > Then a "showstopper," and "a 'transformational' paradigm for pro-installed smart-home systems." When > > Then allows homeowners to tweak the scenes in their home and personalize their system to change temperature, music, and lighting preferences. It's simple: homeowners can select a "When" (on a schedule, with a touch of a button, or after an event occurs), and a "Then" (an action to take place, such as turn on a light, start a playlist, or send a push notification). When > > Then lets homeowners make the small changes that personalize their smart home as their lifestyle changes, without bogging down dealers with many requests to update playlists, lighting times, and more. OS 2.10 also provides additional music flexibility with native streaming services Pandora, Spotify, SiriuxSM, iHeartRadio, and more, which can also be set as *Whens* in smart home scenes. The software also brought a host of new tools for dealers, and continues to lead the category for home automation innovation.

The Audio Product of the Year Award was given to the Control4 Triad One Streaming Amplifier, a single-zone, high-resolution, wired and wireless streaming amplifier which distributes and synchronizes local audio sources, such as television

audio, turntable or media players, over the IP network in a Control4 system. The Triad One functions as an amplifier, streaming sound system, and a music controller within a Control4 smart home, and was designed with flexibility in mind to deliver high-quality audio to a variety of installation scenarios without requiring wiring.

The Control4 Pakedge Certified Network Administrator Program (PCNA) won the coveted Best New Education Program. PCNA is a brand-new training experience launched in the fall of 2017 and currently boasting its first 100 graduates as of December. PCNA employs a unique blend of comprehensive online coursework with hands-on practical learning using Pakedge networking gear to provide dealers and technicians the networking knowledge they need to design, install, and manage wired and wireless IP networks. The PCNA course curriculum combines six interactive courses, online instructional office hours, and an online third-party proctored certification exam to ensure networking competency for industry dealers.
