## **VOXX Advanced Solutions to Debut The Future of Body Cameras at ISC West 2017**

HAUPPAUGE, N.Y., April 4, 2017 /PRNewswire/ -- [VOXX Advanced Solutions Corporation \(VASC\)](#), a wholly-owned subsidiary of [VOXX International Corporation](#) (NASDAQ: VOXX), today announced the Company will showcase ACCU.C 4G, a streaming 4G wearable body camera and 360-LP, a 360-degree body, dash and helmet camera at the upcoming ISC West Show in Las Vegas (April 5 - 7). Both camera solutions were designed for the specific needs of law enforcement officials and will be demonstrated inside the EyeLock booth (#8117) at the show. EyeLock, a market leader of iris-based identity authentication solutions, is a majority owned subsidiary of VOXX International.

**ACCU.C 4G**, a streaming 4G wearable body camera integrates streaming communication into a rugged, portable and reliable design, which is sure to surpass all expectations with a perfect combination of form and function. Designed for the specific needs of law enforcement officers, the ACCU.C 4G body camera provides clear, accurate video and audio footage for limitless use cases far beyond the capabilities of standard body cameras available today, and provides users with the ability to stream and/or record events as they happen. This device also provides certified users with a real-time assessment of ongoing events as they are happening and can live stream footage to nearby connected devices with text alert notifications.

**360-LP**, a highly versatile 360-degree body, dash and helmet camera utilizes the core technology developed by 360fly, Inc., VOXX's partner in the retail 360-degree camera space. 360-LP is changing the shape of video with a single-lens camera that captures stitch-less 360-degree video (2880x2880) with interactive and mobile viewing capabilities in powerful 4K resolution. The camera's unique form factor features a slim, curved design developed to provide law enforcement officers with a multi-purpose solution for various use cases with the unique mounting options for the vehicle, helmet and body.

"The introduction of ACCU.C 4G and 360-LP provides advanced technology to law enforcement and other organizations with the ability to stream, capture and record real-time situations as they occur, beyond what is available in the traditional body camera market today. The addition of the ACCU.C 4G body camera for law enforcement officers will now give them the same capabilities that most cell phone equipped bystanders have today," said Tom Malone, President, VOXX Advanced Solutions Corporation. "In addition to the 360-LP offering being the most versatile 360-degree body camera on the market, it also acts as an in-vehicle dash camera, providing officers with footage far beyond what is captured in standard cameras today, which only record the view through the front windshield. With the 360-LP, officers can capture and record all events and activities in and around the vehicle, giving them a view of the front, sides, back and even inside the vehicle."

Both the ACCU.C 4G and 360-LP provide a complete and secure end-to-end solution, with a smooth transfer from event capture to file upload always preserving the complete integrity of a secure chain of custody for all audio and video content. The camera will automatically upload content captured via Wi-Fi, LTE (ACCU.C only) and/or direct download when placed into charging stations, so footage is never handled by human hands. The data management software is the last piece to making this a complete end-to-end solution, providing users with remote archiving capabilities to store, manage, search, and review captured footage.
