

FireEye Corporate Citizenship and Sustainability Policy

At FireEye, we believe that corporate citizenship and sustainability is just as important as the work we do to protect our customers from cyber threats. Our 4,000 global customers choose us as their sustainable cyber security partner to protect their critical infrastructure. Critical infrastructure resilience protects everyone by ensuring access to energy, water, transport, banking and finance, and other essential goods and services.

Corporate citizenship and sustainability at FireEye is embedded in our corporate values, which in turn defines our corporate culture and guides decision-making at all levels within our organization. We recognize that everything we do has an effect on the global economy, society, and the environment. We insist that our global supply chain gives consideration to compliance, environmental protection, human rights, and health and safety. We also encourage all of our suppliers, partners, and contractors to adopt their own corporate citizenship and sustainability guidelines.

We recently began measuring our environmental and social performance, and we have already found ways to reduce our greenhouse gas emissions and use water more efficiently. Our cloud-based threat prevention platform is more carbon-efficient than on-premise software. Our initial efforts are working, and we are committed to doing our part to leave the world better than we found it.
