December Press Releases:

[Local Governments Across the US Turn to FireEye to Strengthen Cyber Defense](#)

12/15/14 -- FireEye announced that the city of New Orleans and the office of the CTO for the District of Columbia join a growing number of local government institutions that turn to FireEye to update their security infrastructure and protect sensitive data. The city of Miramar, Florida, and the office of enterprise technology for the county of Maricopa, Arizona are among other local government customers that have recently selected FireEye to strengthen their cyber defenses.

[FireEye Announces Next-Generation Endpoint Threat Prevention Platform Leveraging Full Lifecycle Capabilities from Detection to Response](#)

12/11/14 – FireEye announced the first phase in the evolution of the FireEye Endpoint Threat Prevention Platform a limited release of FireEye endpoint exploit detection. The FireEye next-generation Endpoint Threat Prevention Platform is designed to address the shortcomings of multiple agents and signature-based detection by offering:

- **Proactive and adaptive security features** for searching and sweeping endpoints in real-time as well as **providing response capabilities**.
- Industry-proven and highly scalable **MVX™ technology** powering endpoint threat detection.
- **Advanced Threat Intelligence™** from FireEye DTI™ cloud and real-time feeds from FireEye network products, enabling real-time blocking of advanced attacker activities

[FireEye and Deutsche Telekom Partner to Deliver the New Level of Protection Against Advanced Cyber Attacks in Europe](#)

12/09/14 – FireEye and T-Systems, the business customer arm of Deutsche Telekom, announced a partnership to offer a comprehensive managed security service that counters IT espionage and advanced cyber attacks faster and more effectively. The partnership combines T-Systems' extensive managed service presence in the region with FireEye's cyber defense expertise to make this advanced security capability available to organizations across Europe.

[FireEye Wins CRN Enterprise App Award for Security](#)

12/8/14 FireEye won [CRN's 2014 Enterprise App Award in the security](#) category for the FireEye Mobile Security™ application. The CRN "Appys" recognize outstanding achievement by developers of enterprise mobile apps. Winners are selected by a CRN editorial panel and are based on a combination of critical factors including functionality; suitability to task; ease of use; innovation; and potential value to solution providers, their customers and the market in general. The FireEye Mobile Security app is designed from the ground up to identify and stop mobile threats on Android devices. Part of the FireEye Mobile Threat Prevention solution, it can identify advanced malware, compromised adware, and software vulnerabilities in mobile applications using behavioral analysis.

[FireEye Report Identifies Highly-Sophisticated Cyber Threat Group Aiming to Cheat Wall Street](#)

12/01/14 -- FireEye released a comprehensive intelligence report assessing that a financially motivated advanced threat group has been carrying out ongoing attacks against publicly traded healthcare and pharmaceutical companies in a likely attempt to play the stock market. The report -- Hacking The Street? FIN4 Likely Playing the Market -- details the work of a team of native-English speaking operators with extensive knowledge of the nuances in industries they targeted as well as financial practices. Designated by FireEye as FIN4, the group has been observed collecting information from nearly 100 publicly traded companies or their advisory firms, all parties who handle insider information that give a clear trading advantage to the attacker.

Delta Testing Assesses FireEye against other Advanced Protection Solutions

[Delta Testing revealed](#) numbers on our detection capabilities as part of a test comparing Advanced Threat Protection solutions from AhnLab, Checkpoint, Fidelis, McAfee, Vendor A, Trend Micro and FireEye products. FireEye stood out with a 99 percent detection rate – three times the detection rate of the second-ranked Trend Micro. In fact, the average rate of detection among the six vendors not named FireEye was just 17 percent. For the comparison, Delta Testing deployed real, unknown malware samples rather than modified versions of previously discovered malwares. This methodology reflects the reality of today's advanced attacks – they are unknown – and is a far more accurate way to assess advanced threat protection solutions.

White Papers and Reports:

[FireEye Report Identifies Highly Sophisticated Cyber Threat Group Stealing Insider Information](#)

FireEye is currently tracking a group that targets the email accounts of individuals privy to the most confidential information of more than 100 companies. The group, which we call FIN4, appears to have a deep familiarity with business deals and corporate communications, and their effects on financial markets.

[Focus on What Matters: Prioritizing Security Efforts](#)

Targeted threat actors typically follow a predictable sequence of events. Security teams can use that information to boost their security posture by allocating resources and prioritizing efforts that address advanced targeted attacks. In our paper, we discuss the importance of a thorough understanding of the tools, tactics and procedures threat actors use to combat the defenses security teams employ against advanced attacks.

[99% Detection Rate: FireEye Outperforms the Competition by 3X.](#)

Delta Testing revealed numbers on our detection capabilities as part of a test comparing Advanced Threat Protection solutions from AhnLab, Checkpoint, Fidelis, McAfee, Vendor A, Trend Micro and FireEye products. FireEye stood out with a 99 percent detection rate – three times the detection rate of the second-ranked Trend Micro.
