Media Alert: Visit Varonis at Microsoft Ignite

Visit Booth #1047 for product demos and learn how Varonis helps organizations automate the discovery, classification and security of sensitive information on premises and in the cloud

NEW YORK, Sept. 27, 2017 (GLOBE NEWSWIRE) -- [Varonis Systems, Inc.](#) (NASDAQ:VRNS), a leading provider of software solutions that protect data from insider threats and cyberattacks, invites [Microsoft Ignite](#) attendees to visit booth #1047 and see how the Varonis Data Security Platform enables security on premises and in the cloud, hear about the recent release of DatAdvantage for Exchange Online, and learn about ongoing efforts to integrate with Azure Information Protection.

Varonis will also showcase how it will integrate with some of the industry-leading Information Protection solutions such as Azure Information Protection to enable users to better secure sensitive files across enterprise data stores. By integrating with Azure Information Protection, customers will be able to automatically apply classification labels and encrypt files that Varonis has identified as sensitive -- helping organizations to better secure their data regardless of where it is stored and use Varonis to perform additional discovery and classification for files that are already encrypted.

"Enterprises routinely handle documents containing sensitive information about their customers, but surprisingly 64% of organizations say they don't know where their sensitive content is located or who can access it -- a situation that all but opens the door for reputation-shattering breaches and disruptive and expensive attacks from insiders, sophisticated attackers and malware like ransomware," says Varonis' CMO David Gibson. "Fortunately, security automation can help address many critical security issues facing enterprises today. At Microsoft Ignite, we're looking forward to discussing how IT experts can help identify and prioritize risks and quickly lock down their environment."

Varonis protects your file and email servers from cyberattacks and insider threats. The Varonis Data Security Platform analyzes the behavior of the people and machines that access your data, alerts on misbehavior and enforces a least privilege model.

About Varonis

[Varonis](#) is a leading provider of software solutions that protect data from insider threats and cyberattacks. Through its innovative Data Security Platform, Varonis allows organizations to analyze, secure, manage, and migrate their volumes of unstructured data. Varonis specializes in file and email systems that store valuable spreadsheets, word processing documents, presentations, audio and video files, emails, and text. This rapidly growing data often contains an enterprise's financial information, product plans, strategic initiatives, intellectual property, and confidential employee, customer or patient records. IT and business personnel deploy Varonis software for a variety of use cases, including data security, governance and compliance, user behavior analytics, archiving, search, and file synchronization and sharing. With offices and partners worldwide, Varonis had approximately 5,750 customers as of June 30, 2017, spanning leading firms in financial services, healthcare, public, industrial, insurance, energy and utilities, media and entertainment, consumer and retail, technology and education sectors.
