Varonis Introduces Support for Hewlett Packard Enterprise 3PAR StoreServ Storage for File Access and Auditing

NEW YORK, March 06, 2018 (GLOBE NEWSWIRE) -- [Varonis Systems, Inc.](#) (NASDAQ:VRNS), a pioneer in data security and analytics, announced an API integration that makes it possible for [Hewlett Packard Enterprise](#) (HPE) 3PAR StoreServ Storage customers to better protect, manage and secure their enterprise data. Companies using HPE [3PAR File Persona Software](#) can now use the Varonis Data Security Platform to reduce data security risk across the enterprise by discovering and classifying sensitive data, monitoring and analyzing user behavior and file activity, automating threat detection and investigation, and more.

Over the past two years, about one out of four organizations have experienced data loss, data theft, and/or ransomware, according to a [recent survey](#). Proactive data monitoring plays a critical role in securing sensitive business information.

"The amount of data managed by organizations continues to grow exponentially and secure access to critical data is a top concern for CIOs," said Vish Mulchand, Senior Director, Storage Product Management, Hewlett Packard Enterprise. "Joint HPE solutions with Varonis will help our customers improve their security by identifying and securing sensitive files and regulated information, monitoring for threats, and making information available only to authorized users. Together, we're ensuring that our customers' cybersecurity readiness evolves in response to their expanding digital footprint."

Through HPE 3PAR File Persona and its events notification framework, Varonis will be able to analyze SMB and NFS file share events logging who, what, when and where information for all files and directories. The Varonis Data Security Platform detects insider threats and cyberattacks by analyzing HPE events, access controls and file content; prevents and limits disaster by locking down sensitive and stale data; and efficiently sustains a secure state with automation.

"As the cybersecurity industry continues to evolve to respond to new threats, companies and government agencies need to focus on where they have the biggest problems and can do the most good, quickly," said David Bass, Executive VP of Engineering and CTO, Varonis. "For most, that means knowing where their most critical assets are, making sure that they're monitored and secured, and intelligently detecting and responding to threats from both external attacks and insider threats. We're pleased to announce the integration of our Data Security Platform with HPE."
