ArQule Announces \$15.7 Million Private Placement of Common Stock

Company also raises approximately \$4M through unrelated business development activities and other sources during September-October

BURLINGTON, Mass.--(BUSINESS WIRE)-- ArQule, Inc. (NASDAQ: ARQL) today announced the closing of a private placement with certain institutional investors, with leading participation by BVF Partners L.P., pursuant to which the Company raised gross proceeds of approximately \$15.7 million through the sale of 13,938,651 shares of common stock and 3,123,674 warrants. ArQule estimates the net proceeds from this offering will be approximately \$15.5 million. The warrants have an exercise price of \$1.75 per share, will be exercisable immediately and expire four years after the date of issuance.

Taking into account the net proceeds from the private placement, unrelated business development activities and other sources of funding, ArQule now expects to end 2017 with between \$38 and \$40 million in cash and marketable securities. Based on this estimate, the company currently anticipates cash and marketable securities to provide funding into 2019.

ArQule intends to use the net proceeds from this offering to advance clinical trials related to its proprietary pipeline, including derazantinib, ARQ 092, ARQ 531 and ARQ 751, and for general corporate purposes, including working capital.

Through the first part of 2019, ArQule expects to achieve the following clinical milestones:

- ▮ **ARQ 531:** Obtain PK/PD data from phase 1a trial in patients with refractory B-cell malignancies and initiate the phase 1b proof of concept trial
- ▮ **ARQ 092:** Present regulatory authorities with proof of concept data with the purpose of initiating a registrational trial in Proteus syndrome
- ▮ **Derazantinib:** Complete enrollment of patients needed to perform the interim analysis of the registrational trial for intrahepatic cholangiocarcinoma

"ArQule's fully-owned clinical pipeline offers a compelling investment opportunity for BVF," said Mark Lampert, Founder and President of BVF Partners L.P. "We are pleased to have supported the company as an investor for over a decade and look forward to continuing our relationship at this exciting time as the Company continues to advance its programs in oncology and rare diseases."

"With support from our core investors, ArQule is now financed through a number of meaningful clinical inflection points," said Paolo Pucci, Chief Executive Officer of ArQule. "We are focused on progressing our clinical trials and generating data on derazantinib, ARQ 092 and ARQ 531."

About ArQule

[ArQule](#) is a biopharmaceutical company engaged in the research and development of targeted therapeutics to treat cancers and rare diseases. ArQule's mission is to discover, develop and commercialize novel small molecule drugs in areas of high unmet need that will dramatically extend and improve the lives of our patients. Our clinical-stage pipeline consists of five drug candidates, all of which are in targeted, biomarker-defined patient populations, making [ArQule](#) a leader among companies our size in precision medicine. ArQule's proprietary pipeline includes: Derazantinib (ARQ 087), a multi-kinase inhibitor designed to preferentially inhibit the fibroblast growth factor receptor (FGFR) family, in phase 2 for iCCA and in phase 1b for multiple oncology indications; ARQ 092, a selective inhibitor of the AKT serine/threonine kinase, in a phase 1/2 company sponsored study for Overgrowth Diseases, in a phase 1 study for ultra-rare Proteus syndrome conducted by the National Institutes of Health (NIH), as well as in multiple oncology indications; ARQ 751, a next generation AKT inhibitor, in phase 1 for patients with AKT1 and PI3K mutations; and ARQ 761, a β -lapachone analog being evaluated as a promoter of NQO1-mediated programmed cancer cell necrosis, in phase 1/2 in multiple oncology indications in partnership with the University of Texas Southwestern Medical Center. In addition, we have advanced ARQ 531, an investigational, orally bioavailable, potent and reversible inhibitor of both wild type and C481S-mutant BTK, in phase 1 for patients with B-cell malignancies refractory to other therapeutic options. ArQule's current discovery efforts are focused on the identification and development of novel kinase inhibitors, leveraging the Company's proprietary library of compounds. Forward-Looking Statements

This press release contains forward-looking statements, including, without limitation, those related to the achievement of certain clinical and regulatory milestones with derazantinib (ARQ 087), ARQ 092 and ARQ 531, use of offering proceeds and updated financial guidance with respect to cash at year end and the Company's ability to fund operations with current cash and marketable securities. These statements are based on the Company's current beliefs and expectations, and are subject to risks and uncertainties that could cause actual results to differ materially. Positive information about pre-clinical and early stage clinical trial results does not ensure that later stage milestones will be met or that later stage or larger scale clinical trials will be successful. Moreover, derazantinib, ARQ 092, and ARQ 531 or other programs may not demonstrate promising therapeutic effect; in addition, they may not demonstrate appropriate safety profiles in current or later stage or larger scale clinical trials as a result of known or as yet unanticipated side effects. The results achieved in later stage trials may not be sufficient to meet applicable regulatory standards or to justify further development. Problems or delays may arise prior to the initiation of planned clinical trials, during clinical trials or in the course of developing, testing or manufacturing these compounds that could lead the Company or its partners and collaborators to fail to initiate or to discontinue development. Even if later stage clinical trials are successful, unexpected concerns may arise from subsequent analysis of data or from additional data. Obstacles may arise or issues may be identified in connection with review of clinical data with regulatory authorities. Regulatory authorities may disagree with the Company's or its partners' view of data or require additional data or information or additional studies. In addition, the planned timing of completion of clinical trials for ARQ 092 in Proteus syndrome is dependent in part on the National Institutes of Health, our collaborator responsible for the phase 1 trial in Proteus syndrome, to enroll patients, enter into agreements with clinical trial sites and investigators, and overcome technical hurdles and other issues related to the conduct of the trials for which each of them is responsible. There is a risk that these issues may not be successfully resolved. In addition, we are utilizing a companion diagnostic to identify patients in our registration trial with derazantinib in intrahepatic cholangiocarcinoma with FGFR 2 fusions, and we are utilizing or expect to utilize diagnostic tools in our other biomarker-guided clinical trials with ARQ 087, ARQ 092, ARQ 751 and ARQ 531; we or our collaborators may encounter difficulties in developing and obtaining approval for companion diagnostics, including issues relating to access to certain technologies, selectivity/specificity, analytical validation, reproducibility, or clinical validation. Any delay or failure by our collaborators or ourselves to develop or obtain regulatory approval of companion diagnostics could delay or prevent approval of our product candidates. Drug development involves a high degree of risk. Only a small number of research and development programs result in the commercialization of a product. Furthermore, the Company's expectations regarding its use of cash are subject to numerous risks and uncertainties, including, without limitation, those set forth above. The Company may not have the financial or human resources to successfully pursue all of its drug discovery programs in the future. For more detailed information on the risks and uncertainties associated with the Company's drug development, financial condition and other activities, see the Company's periodic reports filed with the Securities and Exchange Commission. The Company does not undertake any obligation to publicly update any forward-looking statements.
