

CA to Resell StoreAge SAN Volume Management Solutions with BrightStor Software; Complementary Solutions to Help Customers Simplify Heterogeneous SAN Administration

ISLANDIA, N.Y. & IRVINE, Calif.--(BUSINESS WIRE)--Jan. 9, 2006--CA (NYSE:CA) and StoreAge Networking Technologies, today announced an agreement under which CA will resell StoreAge's cross-platform virtualization and multi-tiered data protection solutions with its BrightStor intelligent storage management software. The combination will help customers simplify storage administration and enhance data protection in heterogeneous Storage Area Networks (SANs).

"Organizations need to optimize storage resources and data in SAN environments while protecting critical production applications," said Chris Broderick, senior vice president and general manager of CA's storage management business unit. "By offering StoreAge's SAN volume management and data protection technology with our BrightStor software, CA will enable customers to manage large and complex storage resources more effectively."

According to IDC, storage capacities and practices that IT managers thought would support company growth for years are just providing breathing room for a few months, resulting in frequent disruptions in systems and applications. *

"The highly complementary CA and StoreAge solutions address the functional requirements of IT organizations with multi-vendor storage environments," said Laura DuBois, research director for Storage Software at IDC. "Streamlined management of these environments is essential as the total volume of data grows across the enterprise, while the human resources to manage increasing volumes of data remain flat."

StoreAge Virtualization Manager (SVM) employs a "split path" architecture to provide single-point control, virtual volume management and advanced snapshot and replication technology across all storage within a SAN. When used with CA's BrightStor Storage Resource Manager, it helps control costs and optimize SAN resource utilization by dynamically moving data to less expensive media as the business value of the data decreases.

SVM also works with CA's BrightStor ARCserve Backup to minimize backup and recovery windows by providing SAN-wide online backup to disk and tape, local/remote data mirroring, rapid online recovery, and remote vaulting. This helps IT administrators ensure business continuity, reduce data protection costs and minimize risk of data loss without interrupting their production environment.

"CA's innovative technology and industry leadership make them an ideal partner for StoreAge," said Mark Spowart, president of StoreAge Networking Technologies. "By working together, we can deliver comprehensive, cross-platform storage network solutions that help customers reduce the complexity and cost of SAN management."

CA and its authorized partners will initially resell StoreAge's SAN management solutions in North America and EMEA. For more information on CA-StoreAge solutions, please visit <http://ca.com/about/storeage>.

About CA

CA (NYSE: CA), one of the world's largest information technology (IT) management software companies, unifies and simplifies the management of enterprise-wide IT. Founded in 1976, CA is headquartered in Islandia, N.Y., and serves customers in more than 140 countries. For more information, please visit <http://ca.com>.

About StoreAge Networking Technologies

StoreAge Networking Technologies is the leading provider of split-path storage management solutions that centralize and simplify storage network administration. StoreAge network-based solutions provide a uniform, SAN-wide method for provisioning storage, ensuring business continuity, enabling cost-effective disaster recovery, and centrally managing cross-platform, multi-vendor storage environments. StoreAge's award-winning product, SVM™ (Storage Virtualization Manager), has been successfully deployed worldwide, gaining exceptional success in managing storage in a wide variety of application environments including databases, OLTP, e-mail, ERP, CRM, video, and many others. StoreAge offers worldwide sales, support, and service, with principal offices in Irvine, CA and Nesher, Israel. For additional information, visit the company website at www.StoreAge.com or contact the company at info@StoreAge.com.

SVM, multiView, multiCopy, multiMigrate, multiMirror and SVM App-Pack are service marks of StoreAge Networking Technology.
