CA Technologies Delivers Privileged User Governance to Better Protect Against Insider Threats

Latest Release of CA Identity Suite Strengthens Security and Accelerates Time-to-Value with New Deployment Options

NEW YORK--(BUSINESS WIRE)-- CA Technologies today announced a new release of CA Identity Suite that includes integration with CA Privileged Access Manager for governance of privileged accounts and new, flexible deployment options for agility, speed and ease-of-use in identity management and access governance helping to save time and save money.

"Identity and access management technology is designed to both protect and enable the business and its digital transformation initiatives," said Mordecai Rosen, senior vice president and general manager, CA Security business. "The latest release of CA Identity Suite enhances security and time-to-value by providing privileged user governance to help mitigate the insider threat, and proven workflow templates and a new virtual appliance option to dramatically accelerate deployment. This allows our customers to focus their time and resources on building new and compelling applications and services, rather than deploying and integrating the underlying infrastructure."

Privileged User Governance Helps Mitigate Insider Threat

CA Identity Suite's integration with [CA Privileged Access Manager](#) adds a layer of security and compliance measures for privileged users. The integration addresses the need for consistent governance processes and a holistic view of all user access - privileged or not. With capabilities to manage access certifications, requests, provisioning and de-provisioning, CA Identity Suite helps ensure the practice of "least privilege" applies to privileged users so they only have the access needed to do to their jobs. It also helps prevent fraudulent or erroneous actions with the ability to run segregation of duties checks on privileged users and their roles, activity and access.

"Gartner believes that significant value is derived from integrating PAM technologies with other technologies in your IAM portfolio. One specific opportunity for integration involves PAM and identity governance and administration (IGA). A combined PAM and IGA solution provides organizations with increased control, visibility and governance over all user accounts in their environment, which helps reduce vulnerabilities such as an insider threat," wrote Lori Robinson, Gartner analyst, in *[Securing Privileged Accounts Through PAM and IGA Integration](#)*.*

Simplified Deployment and Configuration Delivers Cost Savings, Scalability

New deployment tools include a virtual appliance and proven, pre-configured user scenarios that provide CA Identity Suite customers with an enhanced user experience and the ability to meet growing security and compliance needs quickly at a lower cost.

In a survey of more than 100 CA Identity Suite Users, 70 percent report that using CA Identity Suite has reduced costs more than 25 percent.** The new virtual appliance reduces costs even further with installation and configuration time going from days to minutes so the solution is up and running faster to support business and compliance needs. Organizations also can avoid high recurring software licensing costs with the appliance providing pre-installed instances of an operating system, application server and directory.

Complementing the virtual appliance in driving fast time-to-value, the latest release of CA Identity Suite includes Deployment Xpress - a marketplace of pre-configured use case scenarios drawn from hundreds of deployments. Instead of developing common identity management scenarios from scratch, the pre-packaged use cases meet most customer needs for common, consistent identity management services and are easily and quickly deployed across the entire enterprise. What can take weeks to configure with other solutions can be done in just a few days with CA Identity Suite, even if customers want to do customization on approval workflows or branding.

CA Technologies is a Platinum sponsor of [Gartner IAM Summit](#) held Nov. 29 - Dec. 1, 2016 in Las Vegas. Visit booth #109 or [CA.com/security](#) for more information on CA's Security portfolio and [CA Identity Suite](#).
