## Enterprise Automation Platform from CA Technologies Delivers Intelligence for Greater Speed and Efficiency

*New Release Offers Unified Suite of Products for Today's Modern Software Factory*

NEW YORK--(BUSINESS WIRE)-- CA Technologies (NASDAQ:CA) today announced a major new release of the [CA Automic One Automation platform](#), a unified suite of automation products enabled to deliver [Intelligent Automation for the Modern Software Factory](#). The latest release addresses a rapidly growing market that has the potential to reach over \$6B by 2020<sup>1</sup> with critical growth areas in Cloud, Big Data and DevOps driving Datacenter automation.

"Enterprises continue to leverage well-defined, highly automated processes to enable software to be developed in shorter cycles and deployed into production at higher-velocity," said Ayman Sayed, president and chief product officer at CA Technologies. "Intelligent Automation offers the path to enhancing a more agile enterprise. By enabling enterprises to move from traditional process automation to Intelligent Business Automation, CA Automic delivers on the promise of the Modern Software Factory."

### Automating the Modern Software Factory with V12.1

Unlike other products on the market that combine different user interfaces, reporting tools, analytics databases and engines, the CA Automic One Automation Platform uniquely runs on a single, unified, common platform delivering a comprehensive business-driven solution.

- | **For IT Operations leaders who need to keep pace with the speed of modern Dev teams and the business:**
  - | CA Automic V12.1 provides a unique intelligent automation offering to simplify processes and deliver zero-touch self-service capabilities within the Modern Software Factory.
- | **For Development leaders who must free up their development teams to focus on innovation within the Modern Software Factory:**
  - | CA Automic V12.1 provides new shift-left capabilities to remove scripts and manual efforts, and helps to enable the dev teams to automate within and orchestrate across the DevOps tool chain in a remarkable zero-touch self-service manner.
- | **For Business owners who require Dev & IT to shift to agile and modern application delivery:**
  - | CA Automic V12.1 helps to enable the business to drive top line growth and customer experience by providing a fully automated agile enterprise with unique intelligent automation and the capabilities to automate within and orchestrate across the DevOps tool chain.

The CA Automic One Automation platform enhances every company's transformational journey to deliver an agile business, deploy applications faster, enhance security and enable automated remediation of application performance.

### Committed to Intelligent Automation for the Modern Software Factory

According to research by IDC<sup>2</sup> and Forrester<sup>3</sup>, CA Technologies is amongst the top global providers of both Workload Automation and Continuous Delivery and Release Automation. In September 2017 CA Technologies was recognized as a Leader in the Gartner Magic Quadrant for Application Release Automation.<sup>4</sup>

Today's announcement of the new platform is part of CA Technologies' ongoing commitment to enabling intelligent automation for the enterprise. Aligned with bringing the Modern Software Factory to life for accelerated business transformation, CA Technologies brings together the full line of automation products from across the company, including Automic, to empower modern application delivery.

### Supporting Quotes

"The speed of change in the DevOps/Agile space is driving greater needs for seamless control across the whole process from business needs through development and test to operations. Release automation now has to have additional intelligence around areas such as orchestration, as well as having the capacity to embrace multi- and hybrid-cloud architectures without the user having to overly concern themselves around the actual physical aspects of the platform. Organizations should be looking for systems that not only meet their requirements now, but where the vendor can already provide pointers as to how the system will support changing requirements in the future. With such a dynamic pace of change, any need to reverse out from a solution chosen now to a new solution down the line due to a lack of flexibility on the part of the vendor could be disaster for an organization." - Clive Longbottom, analyst and founder, Quocirca.

"CA Technologies has aligned its DevOps and application release automation tooling with Automic Release Automation (RA) at its center. CA Automic's business process approach is designed for the larger enterprises with heavy-duty release requirements and has excellent support for new development paradigms such as containerization." - Michael Azoff, principal analyst, Ovum.

CA Automic Workload Automation V12.1, CA Automic Release Automation V12.1 and CA Automic Service Orchestration V12.1 as part of the CA Automic One Automation Platform are immediately available for general shipment. All plugins are immediately available on the [Automic Marketplace](#). Pricing is on demand for non-CA Automic customers.
