

## **Constellation Energy's Projects & Services Group Relocates Its Southeast Operations to St. Petersburg**

**St. Petersburg, Fla., Dec. 1, 2008** - Beginning today, Constellation Energy's Projects & Services Group's Southeast operations is expanding to a new office location. The company has relocated its Southeast office to the First Central Tower in downtown St. Petersburg, Fla. The new facility gives Constellation Energy's Projects and Services Group a central location in a consolidated facility convenient for employees and customers. The company's office had been previously located in St. Pete Beach, Fla., and operated as Water & Energy Savings Corporation, which was acquired by Constellation Energy's Projects & Services Group in August. The new Southeast office will be located at:

**First Central Tower  
360 Central Ave., Suite 250  
St. Petersburg, FL 33701  
New telephone number: 727.322.4200**

"We are looking forward to operating out of our new St. Petersburg office, which will give our clients and employees a consolidated, central location from which to offer our market leading suite of water and energy conservation services," said Gene Overmyer, senior vice president of Constellation Energy's Projects & Services Group. "This improves the operational efficiency of our business as we continue our mission of assisting organizations to find efficiencies, from reduced energy and water consumption, to the deployment of solar, geothermal and other clean, renewable energy systems."

Constellation Energy's Projects and Services Group ([www.ceprojects.com](http://www.ceprojects.com)) is the energy services arm of North America's largest retail and wholesale energy company, Constellation Energy. Serving business and institutional customers nationwide, Constellation Energy's Projects and Services Group specializes in financial and environmental solutions that can significantly reduce energy consumption and costs. Many of the improvements are financed through guaranteed savings. Constellation Energy's Projects and Services Group delivers the technical expertise to develop large scale energy projects, such as solar, biomass and geothermal projects and on- or off-site power generation systems. The company also designs and implements full energy system retrofits that save energy and reduce harmful emissions.
