Baltimore Gas and Electric Company Closely Monitoring Hurricane Earl and Assessing Potential Impact to Central Maryland Customers

Utility urges customers to always be prepared for possible power outages

BALTIMORE, Sept. 1, 2010 – Baltimore Gas and Electric Company (BGE), today announced that it is closely monitoring Hurricane Earl and identifying all available restoration resources should the storm result in electric service interruptions for Central Maryland customers later this week. The utility also urged customers to stay prepared for possible power outages and take the necessary steps to protect their families and property in advance of the storm’s arrival.

“Based on current forecasts, it does not appear that Hurricane Earl will significantly impact BGE’s Central Maryland service area, however there is still the potential for power outages associated with this storm and BGE is proactively planning for this possibility,” said A. Christopher Burton, senior vice president of gas and electric operations and planning for BGE. “In addition to closely monitoring the weather and discussing its possible impact, BGE is also alerting employees that they may be needed for restoration activities later in the week and identifying external resources that could be asked to assist with the restoration effort. BGE is also working very closely with state and local authorities to ensure a coordinated effort.”

The safety of BGE’s customers and employees is always the utility’s top priority. Customers should avoid downed power lines and report them immediately by calling 1-877-778-2222. Customers should also call this number to report power outages where downed wires are not apparent. Only qualified BGE personnel or contractors are authorized to remove debris from power lines. Customers should never approach downed wires for any reason.

Just as BGE proactively prepares for storms, customers are strongly encouraged to also be ready for power outages. The best way for customers to prepare is by creating a storm kit to have on hand should they experience a power outage. The following items should be included in the kit:

- Flashlights – not candles
- Fresh batteries
- Battery-operated clock radio
- Corded telephone
- Fully charged cell phone
- Non-perishable food
- Blankets

Customers should also consider filling the fuel tanks of their vehicles in the event a power outage affects service to neighborhood gas stations. For customers who rely on well water, filling a bathtub with water in advance of an approaching storm is strongly recommended. Customers should also make sure smoke detectors have battery backups and are operating properly and remember to unplug or turn off sensitive electronic equipment and appliances in advance of severe weather.

Additionally, customers with special needs such as those who may be elderly, handicapped or dependent on electricity for medical equipment, should have alternative arrangements in place should they experience an extended power outage. Additional important information on storm preparedness can be found in the [Storm Safety](#) section of www.bge.com

Once service restoration begins, BGE's priorities are public safety issues and critical facilities, such as pumping stations, 911 centers and hospitals. Then restoration is generally scheduled so that the greatest number of customers can be restored as quickly and as safely as possible. However, in cases of extended power outages, consideration is also given to customers who have been without service for the longest.

BGE, www.bge.com, headquartered in Baltimore, is Maryland's largest gas and electric utility, delivering power to more than 1.2 million electric customers and more than 640,000 natural gas customers in Central Maryland. The company's approximately 3,000 employees are committed to the safe and reliable delivery of gas and electricity, as well as enhanced energy management, conservation, environmental stewardship and community assistance. BGE is a subsidiary of Constellation Energy, www.constellation.com, a FORTUNE 500 company also headquartered in Baltimore, with subsidiaries that generate, sell and provide other energy-related services to customers throughout North America.
