German Premium Cars and Trucks Manufacturer Selects Citrix ShareFile to Manage Document Workflows Across Globally-Dispersed Teams

Citrix ShareFile Helps Global Auto Manufacturer Collaborate Across Geographies in a Flexible, Secure Way

SANTA CLARA, Calif.--(BUSINESS WIRE)-- Businesses today are faced with the challenges of ensuring their IT systems are more agile and responsive to changing digital economy. How companies securely manage document workflows and the sharing of data, including confidential intellectual property, across globally-dispersed teams becomes more and more critical. Daimler AG, one of the largest producers of premium cars, was seeking an improved, flexible and secure solution to exchange large files for its 280,000 employee global workforce. Citrix ShareFile met these requirements.

ShareFile provides a solution that can scale to the company's needs to reach all of its 280,000 employees where ever they are, while giving them the ability to maintain a local in-country control plane for security and compliance. By adopting ShareFile, the company will be able to reduce the support required for legacy systems, reduce the risk of data loss by sharing through email, and create a self-service tool that gives employees, and in many cases external vendors, the ability to securely collaborate on files across their global workforce.

Citrix ShareFile is an industry-leading file sync and sharing solution that meets the needs of today's mobile business without compromising security. It integrates with the major DLP systems and protects data in motion with information rights management. ShareFile gives users true enterprise-class data services across all corporate and personal mobile devices, with the flexibility of cloud or on-premises deployment, all while maintaining total IT control.

Quote: Greg Lissy, Vice President, Enterprise Product Management, Citrix

"As a global leader in auto manufacturing, Daimler AG continues to take advantage of the latest in innovative technology to stay ahead of the competition. By implementing ShareFile, the company now has the ability to maintain a local in-country control plane for security and compliance. Additionally, the company will be able to reduce the support required for legacy systems, minimize the risk of data loss via sharing through email, and create a self-service tool that gives employees, and in many cases outside vendors, the ability to securely collaborate on files across their global workforce. This is an example of how enterprises are relying on Citrix ShareFile to securely collaborate, while meeting every document sharing need."
