

Converted Organics and World Sports Alliance Name Control Power Systems Inc. Principal Contractor for Small Scale Waste-to-Fertilizer Units

BOSTON, May 28, 2009 (BUSINESS WIRE) -- Converted Organics Inc. (NASDAQ:[COIN](#)) and the World Sports Alliance (WSA) announced today that they have selected Control Power Systems Inc. (CPS) of Fairfield, New Jersey as the principal contractor for the small-scale waste-to-fertilizer units to be used in the WSA Public-Private Partnership Programs in the Specific Sector of Waste-to-Fertilizer.

The WSA is proposing Waste-to-Fertilizer Public-Private Partnership programs to its 24 Member States. Each WSA program would consist of 6-10 individual fertilizer units, with annual production capacities of 18,000 - 30,000 tons per unit, per program, per year. The World Sports Alliance is an [intergovernmental organization](#) (IGO) headquartered at the UN Plaza in New York City.

"These prefabricated micro plants have been developed specifically for deployment among WSA's Member States. The nature of the design offers rapid, fairly simple, on-site installation at a relatively low cost," said H.E. Mr. Alain Lemieux, President and Founder of the WSA. "The design, which affords a high degree of flexibility and is adaptable to a wide range of climates and terrain, is therefore the logical choice for WSA Member States that wish to participate in the Waste-to-Fertilizer Sector."

"CPS has the skills and expertise to help Converted Organics and WSA realize the full potential of this promising program," said Jack Walsdorf, Vice President of Waste Management for Converted Organics. "The 24 WSA Member States have a substantial need for quality fertilizers with an organic foundation. CPS will incorporate Converted Organics' technology into intermodal containers, fabricated in the USA and assembled on a "plug and play" type basis in each of the participating Member States. The probable need for assembly line production capability is consistent with the CPS experience."

"The selection of CPS for design, engineering and fabrication of these unique units is an important step in meeting demand from our Member States, and we are pleased to have CPS as part of our team," continued President Lemieux. "Thus far, the initial reaction to the program among WSA's Member States has been very positive."

"At CPS we have over 30 years of experience and success in unitized, skid mounted system design, fabrication and deployment. The unique challenges presented by the requirements of Converted Organics and the WSA for application in the WSA member countries fit our skills and know-how very well," said Dov Shevich, founder and President of CPS.

About Converted Organics Inc.

Converted Organics (NASDAQ:COIN, www.convertedorganics.com), based in Boston, MA, is dedicated to producing high-quality, all-natural, organic soil amendment and fertilizer products through food waste recycling. The Company uses its proprietary High Temperature Liquid Composting (HTLC) system, a proven, state-of-the-art microbial digestion technology, to process various biodegradable food wastes into dry pellet and liquid concentrate organic fertilizers that help grow healthier food and improve environmental quality. Converted Organics sells and distributes its environmentally-friendly fertilizer products in the retail, professional turf management, and agribusiness markets.

Converted Organics' flagship manufacturing facility is located in Woodbridge, New Jersey. A second manufacturing site is located in Gonzales, California, and a third is under development in Johnston, Rhode Island. Converted Organics' products have been tested in numerous field trials for more than a dozen crops with the result that, on average, the net value of the farmer's crop increased 11-16 percent, depending on the particular crop and product application. This is due, in part, to the disease suppression characteristics of the product, which reduce or eliminate the need for other costly, often toxic, crop protection applications. In a number of lab and field trials, Converted Organics' liquid product has been shown to be effective in mitigating powdery mildew, a leaf fungus that affects most plants and grasses and restricts the flow of water and nutrients to the plant. Increased use of nitrogen in commercial agriculture and turf grass applications, such as on golf courses, has reduced the soil's ability to absorb nitrogen and other nutrients. Using the products produced by Converted Organics helps restore the soil by replenishing these micronutrients. This reduces the amount of nitrogen required in a virtuous cycle that benefits from long-term use. As a result, use of the product reduces chemical run-off to streams, ponds and rivers, an objective with significant long-term benefits to the environment.

Converted Organics' products have a long shelf life compared to many other organic fertilizers. The Company's fertilizer products can be used on a stand-alone basis or in combination with more traditional fertilizers and crop protection products. Converted Organics expects to benefit from increased regulatory focus on organic waste processing and on environmentally-

friendly growing practices.

This press release contains forward-looking statements that are subject to risks and uncertainties. These forward-looking statements include information about possible or assumed future results of our business, financial condition, liquidity, results of operations, plans and objectives. In some cases, you may identify forward-looking statements by words such as "may," "should," "plan," "intend," "potential," "continue," "believe," "expect," "predict," "anticipate" and "estimate," the negative of these words or other comparable words. Forward-looking statements include the Company's ability to continue full operations at its Woodbridge facility and to become more efficient in its operations, the Company's ability to continue to sell its product to other customers, and the Company's ability to raise financing on a timely basis, if at all. These statements are only predictions. One should not place undue reliance on these forward-looking statements. The forward-looking statements are qualified by their terms and/or important factors, many of which are outside the Company's control, involve a number of risks, uncertainties and other factors that could cause actual results and events to differ materially from the statements made. The forward-looking statements are based on the Company's beliefs, assumptions and expectations of our future performance, taking into account information currently available to the Company. These beliefs, assumptions and expectations can change as a result of many possible events or factors, including those events and factors described in the "Risk Factors" section in the Company's most recently filed annual report on Form 10-KSB, as updated in the Company's quarterly reports on Form 10-Q filed since the annual report, not all of which are known to the Company. Neither the Company nor any other person assumes responsibility for the accuracy or completeness of these statements. The Company will update the information in this press release only to the extent required under applicable securities laws. If a change occurs, the Company's business, financial condition, liquidity and results of operations may vary materially from those expressed in the aforementioned forward-looking statements.
