

Daydots Launches Spanish Version of Daydots University to Educate Foodservice Employees

FORT WORTH, Texas, April 3, 2006: Daydots, the leading manufacturer and distributor of food safety products and services, has announced that Daydots University, an online training course that provides the foodservice industry with an efficient and cost-effective method for training employees at all levels on the basics of food safety, is now available in Spanish.

"We developed the Spanish version of Daydots University in response to customer demand and to service the large population of Spanish speaking employees," said Paul McGinnis, vice president of Marketing for Daydots. "We view this as a valuable enhancement to our existing program."

The Spanish version contains the same 24 short, food safety training modules as the English version and was translated by a professional translator to ensure all food safety terms were used correctly. The Daydots University interactive training course is comprised of four levels, freshman through senior, with six courses at each level. At the end of each level, students take a comprehensive exam and upon completion of the entire curriculum receive a diploma. Currently, more than 65 companies are using the English version of Daydots University.

Daydots University serves as a cost-effective online tool for managers and employees to learn about food safety, as well as how to implement or improve a food safety program. The information on the online course is based on the FDA Model Food Code and also serves as a refresher for previously-trained employees, supplementing accredited food safety programs such as ServSafe, offered by the National Restaurant Association's Educational Foundation.

About Daydots

Based in Fort Worth, Texas, with distribution operations in the United States, Europe, Australia and Asia, Daydots is the world's leading manufacturer and distributor of food safety solutions. With the goal of "Making the world a safer place to eat," Daydots offers more than 4,500 products and services, including its original day-of-the-week food safety labels. Daydots also produces and distributes products for food labeling and rotation; temperature control; training and auditing; food preparation and handling; sanitation and cleaning. Daydots' recently expanded line of products also includes personal hygiene, material handling, workplace maintenance and general office products.
