Integra LifeSciences Announces the European Launch of Integra® Dermal Regeneration Template Single Layer "Thin"

PLAINSBORO, N.J., May 17, 2017 (GLOBE NEWSWIRE) -- [Integra LifeSciences Holdings Corporation](#) (Nasdaq:IART), a leading global medical technology company, today announced that it has launched in Europe Integra® Dermal Regeneration Template (IDRT) Single Layer "Thin" for dermal repair defects reconstruction in "one-step" procedure.

Integra® Dermal Regeneration Template Single Layer "Thin" is the latest extension of Integra's collagen range of dermal repair products. Since the introduction of IDRT in 1996, the brand portfolio has expanded to include single layer, bilayer and flowable versions. This latest addition reinforces the company's proven advanced collagen technology for more than 20 years in a variety of indications, including life-threatening burns, scar revisions and diabetic foot ulcers.

"The European clinical community has been looking forward to the market release of Integra Single Layer Thin, the thinnest dermal substitute available," said Stéphane Corp, vice president of Tissue Technologies in Europe. "We will now be able to provide plastic and reconstructive surgeons a thinner matrix for dermal repair they can use in a single-stage procedure, while maintaining the same aesthetic and functional benefits of a two-stage procedure, which will ultimately reduce overall hospital stays for patients."

Integra® Dermal Regeneration Template Single Layer "Thin" will be marketed by Integra's European Tissue Technologies sales organization in Europe, the Middle East and Africa and by Integra's Canada and Latin America Sales organization later this year.

About Integra

Integra LifeSciences is dedicated to limiting uncertainty for clinicians, so they can concentrate on providing the best patient care.
