

## Sabre Chooses INAP for New Multi-Year IP Services Agreement at INAP's Dallas Data Center

### The leading technology provider to the global travel and tourism industry taps INAP for their Signature Performance IP™ Service

ATLANTA, May 10, 2017 /PRNewswire/ -- Internap Corporation (NASDAQ: INAP), a provider of high-performance data center services including Colocation, Network and Managed Services, and Cloud Services, and Sabre Corporation (NASDAQ: SABR), a leading global technology provider to the travel and tourism industry, today announced a new IP services agreement at INAP's Dallas data center.

Due to the critical operations managed by Sabre's customers, including passenger and guest reservations, revenue management, and flight, network and crew management, their network reliability is essential to meeting the needs and expectations of travelers. Sabre needed a managed solution with diverse, redundant paths to the internet over multiple ISP backbones to reduce the risk of network outages and deliver reliable, high-speed IP service for stable, consistent connectivity. INAP was chosen as the company to best meet those requirements and expectations through their Performance IP™ service.

Performance IP™ offers flexible access alternatives based on proximity, platform and bandwidth needs, including leased lines, Metropolitan Access Networks and data center cross-connects. Other fail-safe network features include end-to-end N+1 design, hot swappable spares, and comprehensive monitoring via two geographically-dispersed network operations centers.

"INAP is pleased to welcome Sabre as a customer in our Dallas data center," said Corey Needles, INAP Colo's SVP and General Manager. "We are confident our patented IP technology will provide the low latency and redundancy Sabre needs to provide the best user experience to the airlines, travel agents and hospitality partners they serve."

"Availability and responsiveness are foundational drivers for our customers' success," said Kevin Tucker, Sabre vice president of infrastructure services and enterprise automation and architecture. "INAP's track record and expertise align seamlessly with our strategic direction, so we look forward to delivering the best experience to our customers through this partnership."

INAP's Performance IP™ service can reduce latency and improve network performance. By combining multiple carrier backbones and real-time route optimization, Performance IP™ provides reliable, high-speed IP service for stable, consistent connectivity.
