## Latest PTAB IPR Rulings Increase Favorable Decisions for ParkerVision

JACKSONVILLE, Fla., March 08, 2017 (GLOBE NEWSWIRE) -- **ParkerVision, Inc.** (Nasdaq:PRKR), a developer and marketer of semiconductor technology solutions for wireless applications, today announced that the Patent Trial and Appeal Board ("PTAB") has issued its latest decisions with regard to the petitions for *Inter Partes* Review ("IPR") filed by Qualcomm against ParkerVision patents, increasing the favorable decisions to over six out of the ten petitions originally filed.

ParkerVision received early favorable rulings in March 2016 when the PTAB rejected Qualcomm's request for institution on three IPR challenges to a ParkerVision patent. With these most recent PTAB decisions, ParkerVision has received three additional favorable decisions and one split decision, confirming the validity of claims from a second challenged patent. Qualcomm received favorable rulings on two IPR's and ParkerVision chose early on not to defend one IPR challenge.

With these latest decisions, there are no further IPR's challenging ParkerVision patents currently before the PTAB.

ParkerVision CEO Jeffrey Parker commented, "We continue to take positive steps forward in our Qualcomm proceedings and believe these results are indicative of the strength of ParkerVision's innovations and our plan to realize the value of those assets, particularly in light of the high success rate of petitioners in invalidating patents through IPR challenges. We are pleased that the PTAB confirmed the validity of claims from both of the patents we chose to defend."

### **About ParkerVision**

ParkerVision, Inc. designs, develops and markets its proprietary radio-frequency (RF) technologies that enable advanced wireless solutions for current and next generation communications networks. Protected by a highly-regarded, worldwide patent portfolio, the Company's solutions for wireless transfer of RF waveforms address the needs of a broad range of wirelessly connected devices for high levels of RF performance coupled with best-in-class power consumption.
