

### Q3 2016 International Franchise Restaurant Sales

In our recently filed Form 10-Q for the quarterly period ended September 25, 2016, we identified a mistake within Item 2, Management's Discussion and Analysis of Financial Condition and Results of Operations. Under results of operations, when describing our increase in international revenues, our international franchise restaurant sales discussion should have read as follows--"International franchise restaurant sales increased 13.0% to \$165.1 million, and 9.7% to \$481.2 million for the three and nine month periods" (rather than as originally stated increase of 11.7% to \$151.1 million, and 8.4% to \$454.2 million for the three and nine month periods). As discussed in the 10-Q, International franchise restaurant sales are not included in Company revenues; however, our international royalty revenue is derived from these sales.
