

## TomTom Telematics collaborates with SOTI to deliver enhanced mobility control with remote mobile device management

**Amsterdam, The Netherlands, 15 March 2017** – TomTom Telematics has today announced a [collaboration with SOTI](#) that will see the company's popular flagship enterprise mobility management (EMM) software, MobiControl, be made available to manage [TomTom PRO 8 series](#)\* driver terminals.

SOTI MobiControl gives fleet managers complete remote control of the TomTom PRO 8 series, an open-platform device that is easily customised with apps to meet the needs of specific users and functions. Content and user profiles on devices are managed centrally, so drivers have access to the most appropriate and up-to-date applications for their specific role, without having to return to base.

SOTI MobiControl offers a powerful feature set, enabling managers to dynamically control user groups and policies, allowing access to apps, functionality and content based on a user's role in the business. Access can also be determined based on geographical location. These features not only help to control app usage, but also to manage data costs, for example by not allowing users to download large files when they are abroad.

"SOTI MobiControl allows customers using TomTom PRO 8 series driver terminals to instantly manage and update devices in the field, via one secure interface, so they are always fit for purpose. This takes the complexity out of mobility management and frees up time to focus on core tasks," said Oscar Rambaldini, Vice President of Product Management at SOTI.

"SOTI is a leader in mobile device management, and by offering MobiControl together with the TomTom PRO 8 series of driver terminals we are helping businesses ensure that their field teams have the tools they need to be effective," said Taco van der Leij, VP Marketing at TomTom Telematics. "With hundreds of apps available for [WEBFLEET](#) and PRO 8 series driver terminals we are committed to helping our customers to achieve more with their businesses."

The integration will be handled by OrangeSeven BV, a specialist in MDM that SOTI has selected to provide all MobiControl solutions to TomTom worldwide.
