Ctrack Announces 5-year Contract to Provide Fleet Management Solution to Red Cross Rescue Service in Austria

Platform provides enhanced operational efficiencies, risk management capabilities and regulatory compliance

SAN DIEGO & TYROL, Austria--(BUSINESS WIRE)-- [Inseego Corp.](#) (Nasdaq: INSG) - a leading global provider of software-as-a-service (SaaS) and solutions for the Internet of Things (IoT) - today announced that the Red Cross Rescue Service in Tyrol, Austria, has awarded Inseego's Ctrack a five-year contract to deploy its fleet management SaaS solution across the Red Cross's fleet of rescue vehicles. Ctrack's platform was chosen to drive increased efficiency of the Red Cross's rescue service operations through an advanced fleet management system that monitors multiple parameters of critical importance to the emergency services industry.

Key features of the solution include [driver behavior](#), along with exceptions such as harsh braking and cornering, and automatic trip recording when emergency lights, sirens, or various other indicators are activated.

Where traditionally a vehicle was just a dot on a map, the Red Cross is now provided with continuous in-depth information about every aspect of their fleet. The Ctrack solution not only provides mission critical information for the Red Cross's emergency services, it also helps re-produce trip information to defend legal disputes surrounding insurance claims as well as help comply with government regulations and documentation requirements.

In addition, Ctrack's flexible platform was able to seamlessly integrate with the Red Cross's own in-house software, Inoffice®. This central administrative program was tailor-made to deal with the daily challenges of fleet management and personnel administration. "We take data from Ctrack as well as data from the service administration software and marry them to create a travel log," explains [Rescue Service Tyrol](#) CEO, Andreas Karl.

Importantly, due to Ctrack's ability to link to service scheduling data via Inoffice®, there is no need for a driver identification key. This saves critical time in an environment where every second counts to save a life. "With the links between these two software programs, we are raising our rescue service to a level that has never before been seen in Austria," Karl says.

The fleet manager also benefits from Ctrack's robust [software solution](#). Ctrack helps to provide daily, precise information about the mileage each vehicle travels per month and per year, and provides visibility on which routes they travel. "Accurate data received in real-time optimizes cost accounting and makes strategic fleet control possible, especially when the fleet travels in some very remote locations," adds Karl.

The software implementation also takes away the hassle of manually inputting information. "A digital travel log is of fundamental importance to show all the movements of the vehicles, especially when it comes to complying with some of the country's stringent regulations," says Herbert Hagmann, fleet manager of Rescue Service Tyrol.

"We are extremely satisfied. The service and support that we receive from Ctrack are excellent, and the coordination between IT and technicians is great," concludes Karl.

"We are particularly pleased that Ctrack is professionally supporting the Red Cross Rescue Service with its fleet management SaaS solution. After all, we are united in the fact that many years of experience in the market inspire the further development of product and service in order to continually improve quality for our customers," says Maria Johanning, MD of Ctrack Germany.

ABOUT INSEEGO CORP.

Inseego Corp. is a leading global provider of MiFi®-branded intelligent wireless solutions for the worldwide mobile communications market and software-as-a-service (SaaS) and solutions for the Internet of Things (IoT).
